

## SafelinkID WebDog Gateway

SonicWall – V200

The SafelinkID *WebDog Gateway V200* Solution is designed for Small Businesses with up to 50 Employees. It provides organizations with an easy-to-use, secure and affordable remote access solution that require no pre-installed client software. Utilizing a standard Web Browser, authorized users such as employees, contractors, partners, and customers, can easily and securely access e-mail, files, intranets, Web and legacy applications and remote desktops from any location.

Available in a firmware gateway appliance, it is quick and easy to setup and requires no software to install offsite or on the remote user's computer. Once connected, remote users can start accessing critical data and applications from anywhere, anytime.
